Vreme i način sađenja lukovica

Prolećne lukovice se sade početkom proleća, kada vremenske prilike dozvole baštenske radove.

Lukovice se sade na 2-3 puta većoj dubini od visine lukovice, i to tako što se vrh lukovice okrene na gore, a deo gde raste koren, na dole.

Lukovice je najbolje saditi u grupi da bi se ostvario pravi efekat. Manje lukovice se sade na rastojanje od 5cm, a veće na rastojanju 15-20cm jedna od druge. Lukovice se mogu saditi i u saksijama, i tada je rastojanje lukovica jedne od druge manje, pri čemu treba voditi računa da se ne dodiruju.
